

TOPAS Approved Light Rail Transit Signal

Mallatite Limited become the first UK company to gain TOPAS accreditation.

Innovation Through Design.

With light rail becoming a more popular mode of transport in congested cities, Mallatite Limited offers solutions that enable operators to deliver more reliable, efficient, and seamless journeys for passengers.

Mallatite have further enhanced their LED technology and are now able to offer a Light Rail Transit (LRT) Signal, which offers excellent signal clarity, long-term overall cost savings and ease of installation.

The original unit was Highways Agency approved in 1998; however, we have since redesigned updating capabilities with the aim of seeking TOPAS approval.

There are five symbols available for our Light Rail Transit (LRT) Signal which are selectable from each device, up to twenty one way.

Units can be used stand-alone or as part of a traffic signal assembly. Standard features include remote tram signal monitoring as well as an easily removed Optical System with plug/socket connection for lamp change and maintenance.

We are pleased to confirm our Light Rail Transit Signal has been registered under ref 2022/0217 meeting all the requirements outlined in TOPAS0600 and TOPAS specification TOPAS2514A.

As a result, we are the first and only company in the United Kingdom to list a TOPAS approved LRT Sign.
